*Allowable Subject Matter*

The following is an examiner's statement of reasons for allowance: Claims 1-5 and 7-12 are allowed over the closest references cited below.

The present invention is drawn to a tire comprising a tread made from a rubber composition comprising: (1) a rubber component comprising a styrene-butadiene copolymer rubber having vinyl bond content of not less than 30 % and a bound styrene content of more than 30 mass % but not more than 60 mass %, and (2) at least one compound selected compounds represented by formula (I), (II), (III), or (IV) and (3) an organic (di)thiosulfate represented by formula (V); see claims for structural details.

Araki (JP 2002-069236) discloses a rubber composition comprising 100 pw of a rubber component such as polybutadiene rubber or styrene-butadiene rubber, 0.1-1.0 pw of a thiuram compound or a dithiocabamate compound, and 0.5-2.0 pw of sodium 1,6-hexamethylene dithiosulfate dehydrate which is useful for the manufacture of a retreaded (pneumatic) tire. The patent does not teach use of the particular SB rubber of the instant claims.

Fujiki (JP 10-195237) teaches use of sodium 1,6-hexamethylene dithiosulfate dehydrate as the vulcanization agent for styrene-butadiene rubber. According to the inventor, the heat resistant aging characteristic of the rubber is maximized when the styrene-butadiene rubber has a vinyl content of 35-85 % and when the styrene content is 30 % or less. The patent does not teach use of SB rubber having a styrene content of 30-60 wt %.

Yamagishi *et al.* (JP 2002-362107) discloses use of sodium 1,6-hexamethylene dithiosulfate in conjunction with tetramethyl thiuram monosulfide in polybutadiene compositions. The prior art does not teach or suggest the subject matter of the instant claims.

KR 2002-49429 discloses use of 1-3 phr of sodium 1,6-hexamethylene dithiosulfate and 0.1-0.5 phr of a thiuram-based vulcanization accelerator for curing natural rubber. The prior art does not teach or suggest the subject matter of the instant claims.
